

1 GAME OVERVIEW

Lead a wolf pack through five weeks of hunting. Finish with the most food to become The Alpha.

Players: 3-6 | Time: about 45 min | Weight: light strategy

2 SETUP CHRONOLOGY

- A. Center the Food Tracker board; put the Weeks Left token on 5.
- B. Build the forest for the player count: large/medium prey above the tracker (Deep Forest); small prey, Livestock, and Scavenge below (Near Forest).
- C. Put each matching custom die beside its prey tile.
- D. Each player takes a den, one color of wolves, and a Fight/Share conflict token.
- E. Put one wolf on food space 5; place the remaining wolves in the den.
- F. Give the Alpha token to the loudest howler. That player begins.

3 STRUCTURE OF A ROUND

STALK	In turn order, place 1 wolf; repeat until all wolves are placed.
v	
DOMINANCE	Most wolves dominates; Alpha Pair counts as 2. Ties share dominance.
v	
CHASE	Dominant pack rolls where minimum wolves are present.
v	
RESOLVE	Resolve regions from smallest prey to largest; settle food and conflicts.
v	
ADVANCE	Return/heal wolves, reduce Weeks Left, and pass Alpha to the food leader.

4 TABLE SETUP - 5 PLAYER EXAMPLE

A Food/Weeks board B Deep Forest C Near Forest D Dice beside prey
The image shows a typical 5-player layout; tile mix changes with player count.

1 KEY MECHANICS

- Deep Forest cost: pay 1 food each time a wolf is placed there.
- Placement limits: only 1 wolf total on Livestock; each player may place only 1 wolf on each Scavenge tile.
- Minimum hunt: large prey requires at least 4 wolves in the region.
- Dominance: most wolves is dominant; Alpha Pair counts as 2. All tied leaders are dominant; others are scavengers.
- Die - number: available food. X: prey escapes. C + number: conflict now; flip tile to guaranteed carrion next round. D on Livestock: remove that wolf from the game.
- On X, another tied dominant pack may choose to reroll. Otherwise all wolves return with no food.
- Resolve Scavenge: every pack there gains 1 food, then returns its wolf.

FIGHT / SHARE OUTCOMES

All Share: Split evenly; leftovers start nearest Alpha, clockwise.

One Fights: That pack takes all food.

Several Fight: Each fighting pack injures 1 wolf and gets no food; sharers split.

All Fight: If all dominants are injured, scavengers split the food.

2 SCORING SUMMARY

DURING THE GAME

- Gain food from successful hunts, shared/fought conflicts, carrion, and Scavenge tiles.
- Pay 1 food per wolf placed in Deep Forest.
- An injured wolf misses the next round: Injured -> Healing -> Den.
- If food passes 30, continue counting from 1 and mark the lap.

END GAME

- After Week 5, highest food wins.
- Tie: closest clockwise from the player holding the Alpha token wins.

4 END OF GAME

- Trigger: Weeks Left token reaches 0 after the fifth round.
- Complete the round before comparing food totals.
- Winner: player with the most food becomes The Alpha.
- Tie resolution begins from the Alpha token holder and proceeds clockwise.

3 STRATEGIC TIPS

GOOD HABITS

- Keep a safe Scavenge wolf when larger hunts look volatile.
- Count Alpha Pairs as 2 before judging dominance.
- Watch turn order because Alpha breaks leftover-food and rolling priority.

COMMON MISTAKES

- Forgetting the 1-food Deep Forest placement cost.
- Ignoring hunt minimums or Livestock/Scavenge placement limits.
- Returning injured wolves too early; they spend one round Healing.

COMPETITIVE TIPS

- Hold the Alpha Pair to threaten a late dominance swing.
- A single scavenger can profit when tied leaders all fight.
- Balance cooperation on large prey against becoming the lone fighter.
- Avoid spending several food to chase a low expected return.

REMEMBER

Resolve prey from smallest to largest, then perform Advance in order.
